

Dear Hiring Team,

I am writing to apply for the Tech Lead, AI position at Leapfrog. The role caught my attention because of its focus on AI-assisted software development while keeping engineering judgment, code quality, testing, and technical responsibility at the center.

I am currently independently building a mobile application startup from the ground up. I have been involved in taking the idea through product planning, development, problem-solving, testing, and continuous improvement, and the product is now moving into the testing phase. Working on the product independently has given me the opportunity to work through real development challenges and take responsibility for the technical decisions and implementation.

AI tools are an important part of my development workflow. I use tools such as Cursor, Gemini, and ChatGPT for code assistance, debugging, exploring possible solutions, research, and faster development. However, I do not see AI as the decision-maker. I try to understand what is being generated, check whether it fits the existing code and problem, and validate the final implementation myself. This is one of the main reasons I found this role interesting, as the responsibility described in the position closely matches how I believe AI should be used in software development.

Along with building my own product, I have experience with Python and basic machine learning through my Data Science internship and personal projects. I have worked with data preprocessing, exploratory analysis, model training, evaluation, and simple ML applications. I am also continuing to learn more about AI and its practical use in software and product development.

My background may be different from the typical path for a Tech Lead position, but I believe I can bring genuine hands-on experience with AI-assisted development, independent problem-solving, and end-to-end product building. I am comfortable learning from experienced engineers, taking feedback, and working through difficult technical problems.

I would appreciate the opportunity to discuss my background and how I could contribute to the team at Leapfrog while continuing to grow as an engineer.

Thank you for your time and consideration.

Sincerely,

Uttam Aryal
